Pullman Transport Leasing

$26.98 SRP

Medium-sized tank cars today are used in a variety of service. These brightly-painted cars carry Anhydrous Hydrogen Flouride, a highly corrosive chemical which is widely used by the petrochemical and polymer industries.

Old World Transportation (OWIX) has a sizeable fleet of these cars, most of which are earmarked to transport Glycol.

In 1979 Transport Canada began to require that all tank cars carrying hazardous goods be marked with a 1’ tall orange band. The orange band was in use until 1988.

This 1974-built car depicts the plain as-built appearance of many tank cars of this era.
