MODEL FEATURES:

- Separately applied brake wheel
- Removable load
- Weighted for optimum performance
- Machined solid nickel silver wheels RP25 profile operate on all popular brands of track
- Body-mounted McHenry® scale knuckle spring couplers installed
- Fully-assembled and ready for your layout
- Razor-sharp painting and printing
- Minimum radius: 15"

PROTOTYPE AND BACKGROUND INFO

Iron ore is a rock from which metallic iron can be extracted. About 98% of the mined iron ore is used to make steel. Many railroads around the great lakes have unit trains that transport mined iron ore to transport via barge for processing. These trains are very distinctive with train sets of small cars carrying very heavy loads of dense iron ore.
